Read our Privacy Policy to see how your data is processed and which services we provide.Q: C# Using data from DataGridView within RowUpdating Event I am struggling to pass an integer (id) from a DataGridView to a class object in the RowUpdating event. After an edit in the DataGridView (the data in a class is edited in a setter) i want to pass the id to the function on the object the edited data belongs to. The ID (integer) is within the DataGridView Selected Cell Content I tried a few options: 1. Using the DataGridView's IDataGridViewCellEditingControl. CurrentCell: protected void dgv\_CellClick(object sender, DataGridViewCellEventArgs e) { if (e.ColumnIndex == 0) { if (e.RowIndex == 0) { DataGridViewComboBoxCell cell = (DataGridViewComboBoxCell)dgv[0, e.RowIndex].CurrentCell; if (cell.SelectedItem == null) { int newVal = Convert.ToInt32(dgv[0, e.RowIndex].CurrentCell.Value);

---

**System Requirements For EXE Joiner:**

The NVIDIA GeForce GTX 650 Ti 3GB graphics card with 256 NVIDIA CUDA cores and 1296MHz GPU clock speed was paired with 8GB of graphics memory. The processor used was Intel Core i5-450M 2.9GHz (2.8GHz Turbo Mode) dual-core CPU clocked at 2.9GHz, Intel HD Graphics, and Windows 7 Home Premium 64-bit edition. As with any game, depending on the resolution used for testing, there are some graphics settings and details that may be turned on and off. These include things like anis
