Automotive design is a particular application of AutoCAD, as is architectural design. AutoCAD was first available for AutoCAD LT, and later AutoCAD for Windows (2002), which are used to create technical drawings. These drawings can then be used to communicate design information to an engineer, developer, etc. for products such as automobiles, appliances, machinery, or even musical instruments. Canned layouts AutoCAD is one of the most well known platforms for the development of Microsoft Excel-based templates, or canned layouts. Microsoft Visio and other software for visualization, can also be adapted by creating shapes that can be associated with macro commands. These commands allow for more complex commands to be performed on an object than can be created directly by the software. Some types of custom macros, or macros that run when a command is executed (rather than only running when the macro button is pressed, as it would with AutoCAD's Standard user interface), were also created. The majority of these were developed for 3D models created using ArchiCAD and now commonly used for 3D surfaces and 3D solids. Macros may also be used in reverse. A macro may be written to create an object or set a parameter. A macro that creates a 3D object may be used to generate a model for a customer. Macros can also be designed to implement computer vision and help the user make decisions, by returning a value for a particular situation. For example, a macro could be designed to take a picture, and then the macro would be run and the user would be shown some options to decide what to do with the picture. The macro can provide the user with any number of choices; the user could choose any of a number of things based on the input. a header/footer in a table in a report I'm not sure if the question should be tagged with latex, because I'm not writing in latex, but I'm having trouble adding text to the headers/footers of a table. I've tried several variations of \begin{tabular}... \end{tabular} but nothing seems to do it. Here's a minimal example of the table I have: \documentclass{article} \begin{document} \begin{table}[h] \centering \renewcommand\tabularnewline{}% Just to skip some lines \begin{tabular}{*{2}{|l|}} \hline \multicolumn{ a1d647c40b

Reproduction Improve the accuracy of your 2D drawings and 3D models with absolute precision. Smooth the reproduction of individual objects or groups of objects, for example, by either scaling or by using an "Object Slice" to define the distance along which a group is reproduced. (video: 1:33 min.) Data Converter Create your own custom data attributes to define properties in your drawings. Convert arbitrary data types from one drawing format to another. Save the data into a separate file to share the data with other drawings. (video: 2:09 min.) Markup Assistant Generate complex, multi-level diagrams with a few mouse clicks. Draw and animate 2D views, insert or replace objects, and perform operations on groups of objects. (video: 2:33 min.) Feedback Generate and track your design comments with a convenient User Feedback tool. Generate templates for comments and attach your comments to drawings and drawings in comments. For example, you can automatically insert comments when a specific element is added, removed, or changed. (video: 1:15 min.) Interaction Simplify object placement and selection with multiple simultaneous edits. Avoid the awkward process of switching editing modes and making changes one by one. (video: 2:17 min.) Workflow Simplify the process of creating and editing 2D and 3D models. Add components to your models with a convenient, specialized model-building toolbar. (video: 2:07 min.) Multi-User Editing Create shared models easily across different users. Link together CAD files for a more efficient collaboration experience. (video: 2:15 min.) Accessibility View, analyze, and modify your drawings in a wide range of accessible formats, including text and video. (video: 1:30 min.) Availability Add even more functionality to your drawing in AutoCAD 2023 with the latest drawing components, including: Newly re-architected drawing tools. Timeline components. Time-based drawing and modeling. New drawing and annotating techniques. New forms and interactions. AutoCAD 2023 also delivers new drawing and modeling capabilities with many industry-specific features, including the ability to synchronize designs with Avid's Avid Media Composer® 5.
