Open Autocad. Click on the File menu and then click on Open. Open the exe file and click on Play. Now check the name of the file, if the name of the file is the same as the file which you downloaded then you are done. If the name is different, double click on the exe file to install the program. Autocad will be installed on your PC. Open the Autocad and start your drawing. Go to Google and search for the specific raster file you used. Now click on Download File and download the raster file. Open the raster file. You will be able to open the file on AutoCAD. Now save the raster file to your hard disk and close it. Now go to Windows and open your autocad file. You will be able to open the file on AutoCAD. It is done. Note: All raster files will work but the design should not be too small or too big. It is preferred to use raster files only for the drawing that you need, for example, when you need to submit a drawing you need to do the following steps. Open the design in Autocad. You will be able to see the file as "Scanned image". Open the file in photoshop. Now use photoshop to re-create the raster. Now it is the job of the designer to make the drawing on Autocad and go to the manufacturer for the printing. Now is the time when a project management software is needed.
